

DIGITAL GUARDIAN™ for Insider Threat Protection

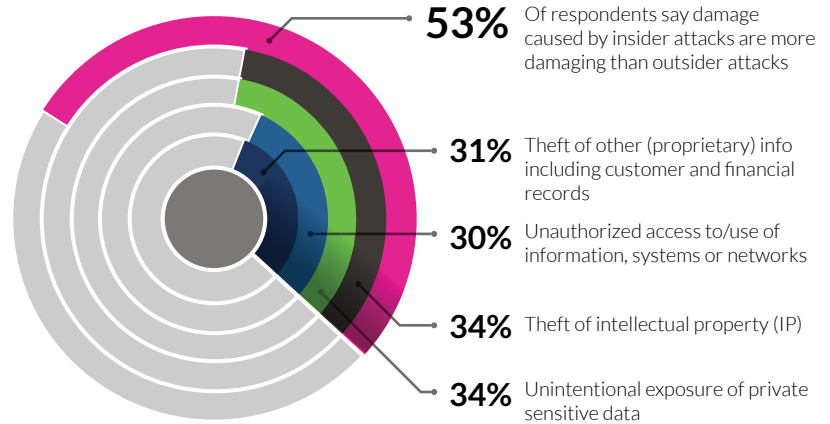

> PROTECT SENSITIVE DATA WITHOUT SLOWING DOWN YOUR BUSINESS

How Safe is Your Company's Data?

Your IT systems are facilitating a flood of data to widely distributed employees, partners and contractors. Users are creating, manipulating and sharing data at unprecedented rates. They are editing it and moving it around in ways never imagined - on network, off of network, on corporate devices, on personal devices, and now into the cloud.

Billions of dollars have been invested in hardening the "office perimeter" but with millions of employees doing work outside the office and off the corporate network, they're leaving your network defenses behind and putting your data at risk.

Common Insider Threat Incidents 2013 US State of Cyber Crime

> SECURITY'S MOST ADVANCED ENDPOINT AGENT

Digital Guardian is security's most advanced endpoint agent providing transformative data visibility and control where you're most vulnerable. It's the only patented data protection agent trusted on millions of endpoints

to secure against insider and outsider threats. It's been proven to run silently for the world's top IP holders, with no impact on employee collaboration or productivity.

Digital Guardian offers unprecedented data visibility and control at the endpoint

Digital Guardian **sees** the file and **sees** that it came from a file share containing sensitive data

Digital Guardian **sees** the tag, **understands** the context, and **protects** by blocking the file transmission

START PROTECTING YOUR DATA RIGHT AWAY

Most data protection solutions require you to spend weeks or months identifying and classifying your sensitive data before protection starts. As soon as you install Digital Guardian it can start to proactively tag and classify your most sensitive data to stop anything proprietary from leaving your company.

SEE MORE, CONTROL MORE

Digital Guardian is data, user and event aware. It monitors all file movement at the origin using a non-invasive approach. This gives you real-time visibility of all data movement and data transmission methods across online, offline, physical and virtual environments, including email, cloud storage, removable media, print and FTP. It will automatically prompt or block an activity depending on the context, then log and audit the event for forensic follow-up. This broad context enables more effective, real-time control.

INNOVATE SECURELY

Digital Guardian automatically blocks and controls only those behaviors that pose a threat to your organization based on the user, event and data type. This unique contextual awareness and non-invasive approach lets you minimize risk without slowing the pace of your business.

"Gartner tells us that we need to leverage our security technology to enable behavioral change. Digital Guardian is helping us understand the context of the user's actions. This context is driving better decisions and changing behavior at the user level."
-Fortune 500 Financial Services Company

PROTECT YOUR DATA WHEREVER IT LIVES, WHEREVER IT GOES

Digital Guardian agents are the only endpoint agents compatible with Windows, Mac and Linux. It offers the industry's broadest applications coverage, recognizing both structured and unstructured files running on multiple systems. You'll have complete data visibility and control regardless of what users are running, what they're running it on, and whether or not they're on the network.

BUILT FOR COMPANIES WITH MORE IP THAN IT

Only Digital Guardian offers complete data protection through an on premise, managed services or hybrid model. Our cloud-based, managed services are the answer if you have more IP than IT. As an extension of your team, we'll expertly develop, deploy and manage all of your policies enterprise-wide as if they were our own.

SCALE TO NEW HEIGHTS

Digital Guardian is as robust as it is stable, designed to be easily and efficiently deployed across your entire user base. It's the only agent-based technology covering 250,000 employees using a single management server, and one of the largest and most respected companies in the world has deployed over 300,000 agents.

> DIGITAL GUARDIAN STANDS UP TO GARTNER'S REQUIREMENTS FOR ENTERPRISE DATA PROTECTION

Can detect sensitive content in network traffic, data at rest and/or on the endpoint

Has a sophisticated, centralized policy and event management console

Can detect sensitive content using partial and exact document matching

Can detect sensitive content using partial statistical analysis

Can detect sensitive content using extended regular expression matching

Can support the detection of sensitive data content in structure and unstructured data, using registered or described data definitions

Can detect sensitive content using conceptual and lexicon analysis

Can block, at minimum, policy violations that occur via email communication

Magic Quadrant Leader

ABOUT DIGITAL GUARDIAN

At Digital Guardian, we believe in data. We know that within your data are your company's most valuable assets. The sum total of innovations, plans and potential. We protect your company's sensitive information like it's our own so you can minimize risk without diminishing returns.

For over 10 years we've enabled data-rich organizations to prevent data loss at the endpoint. Our expert security team and proven Digital Guardian platform radically improve your defense against insider and outsider threats.

Hundreds of customers across a wide range of industries rely on Digital Guardian to protect their critical information at the point of risk. Seven of the top ten IP holders and five of the top ten auto companies trust us with the integrity of their most valuable and vulnerable data. We take pride in knowing that, at this very moment, Digital Guardian agents are securing the sensitive data of the world's most inventive, influential companies.
